

PRESS RELEASE

Nominations Open for Intelligent Health Association 2016 Awards

Judges for the 2016 Intelligent Health Association Awards come from strong academic and technology industrial backgrounds

NEW YORK, December 22, 2015 — The Intelligent Health Association (IHA) announced today that nominations are now open for the 2016 IHA Awards. This is the fourth year the organization seeks to recognize the companies and individuals that have made significant contributions to patient care and healthcare facility management using wireless technologies. See <http://ihassociation.org/awards>.

The distinguished judges are: Gisele Bennett, Georgia Institute of Technology professor; Deborah Cooper, cybersecurity consultant; Alfonso Gutierrez, University of Wisconsin distinguished researcher; Donna Hudson, University of California-San Francisco professor; and John W. Walz, consultant and retired Lucent Technologies manager.

“Hospitals and healthcare facility managers covet these very competitive awards. The Intelligent Health Association sees irrefutable evidence that improvements in healthcare management and meeting the needs of critical, on-time delivery 24x7 are more and more dependent on wireless technologies. Recognizing the pioneers in this effort is a vital part of the IHA’s mission,” says IHA CEO Harry P. Pappas.

Highly regarded in their own fields of technology and medical applications, the judges for the 2016 IHA Awards also have experience on numerous recognition committees to ensure that the Intelligent Health Association Awards were determined fairly. Judges choose from entries submitted by January 15, 2016 midnight ET. Awards will be made this year in three categories:

- Improving the Patient Care and Health Delivery
- Innovative Healthcare
- Comprehensive Integration

The GRAND AWARD is made to one of the three recipients of the 2016 awards.

Award recipients are invited to receive their awards March 2, 2016 in Las Vegas, Nevada at the annual Healthcare Information and Management Systems Society (HIMSS16) conference and exhibition.

About the Intelligent Health Association

The Intelligent Health Association (IHA) is a global, technology-based and technology-focused organization comprising many new technology communities and societies all operating under one organizational structure with a common goal: to help drive the “Evolution to the Health Revolution™” through the adoption and implementation of new technologies in the health eco-system.
